FOREST JACKET 3.0

Forest Jacket is a durable and flexible all-weather jacket developed for outdoor work in forests and nature with varying activity, temperature, and climate. It has a roomy fit with space for inner layers and is suitable for use in autumn, winter, and spring. The jacket is designed to be worn as an outer layer, with its wind and waterproof properties and high breathability. The outer material is a lightweight and durable Cordura polyamide, and inside hangs a loose Gore-Tex Micro Grid Liner. The air gap that forms between the liner and the outer fabric facilitates vapor transport even in extreme cold down to -50°C, helping the user stay dry. The jacket features a spacious hood, ventilation openings under the arms, reinforced and padded elbows, and several functional pockets.

FUNCTIONS

- Highly adjustable fixed hood with excellent fit
- Pre-shaped sleeves
