

TIR TARP

HT4® by Hypertech is a unique product featuring an innovative combination of various new technologies to achieve the exceptional property of making people, vehicles, or other heat-emitting targets less visible to advanced electro-optical sensors. HT4® provides protection across the entire infrared spectrum and is a low-emission technology that operates through absorption-reflection of infrared radiation. The fabric will adapt to the surrounding temperature. The tarp has loops to attach the net and allows for the linking of several tarps if larger camps or operational sites need to be built. Important user instructions: DO NOT USE HT4® IN DIRECT CONTACT WITH THE HEAT SOURCE YOU INTEND TO CONCEAL (human body, vehicle engines, etc.) To function properly, HT4® MUST have an airspace as distance to the heat source. DO NOT PLACE ANY MATERIAL OVER HT4®. Material placed over HT4® reduces its properties. Even fine mesh or other products placed over HT4® are likely to make the heat source visible to the enemy.

FUNCTIONS

- Dimensions 3.5 m x 1.6 m
- THERMAL INFRARED (TIR) Works in MWIR (3-5 µm) and LWIR (8-12 µm) wavelengths for infrared radiation bands
- Also works in the visible spectrum and in the infrared NIR and SWIR bands
- Breathable
- Lightweight
- Easy to apply to objects
- Foldable
- Good temperature management
- Durable

FACTS

Article no.	203224524
Sizes	One size
Colors	1679 TMTP® Multi Terrain Pattern
Material	
Other	Weight : 1040 g

WASHING INSTRUCTIONS
