

RF 150 REV TROUSERS

The RF150 has been developed to complement our line of products with its low weight and volume. The design includes thicker padding for use in lower temperatures and winter environments, combined with exceptionally low moisture retention and quick drying time. The model with TMTP on the A-side and TSUP on the B-side gives flexibility across a range of terrains. The product can be used with the RF 150 reversible jacket 2.0 as added insulation for the sleeping system.
